

**DIRECT TESTIMONY OF**  
**MICHAEL D. SHINN**  
**ON BEHALF OF**  
**SOUTH CAROLINA ELECTRIC & GAS COMPANY**  
**DOCKET NO. 2019-2-E**

1   **Q.   PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND CURRENT**  
2   **POSITION.**

3   A.       My name is Michael D. Shinn, and my business address is 220 Operation  
4       Way, Cayce, South Carolina 29033. I am currently employed by South Carolina  
5       Electric & Gas Company (“SCE&G” or “Company”) as General Manager of the  
6       Fuel Procurement and Asset Management Department (“Fuel Department”).  
7

8   **Q.   PLEASE BRIEFLY SUMMARIZE YOUR DUTIES WITH SOUTH**  
9   **CAROLINA ELECTRIC & GAS COMPANY (“SCE&G” OR**  
10   **“COMPANY”).**

11   A.       My responsibilities include managing the purchase and delivery of coal, No.  
12       2 fuel oil, and limestone on behalf of the Company and as an agent for South  
13       Carolina Generating Company (“GENCO”). Also, I am responsible for uranium  
14       procurement functions for the nuclear generating facilities operated by SCE&G.  
15       These responsibilities include the contracting for natural uranium and conversion  
16       services.

1 **Q. DESCRIBE YOUR EDUCATIONAL BACKGROUND AND YOUR**  
2 **BUSINESS EXPERIENCE.**

3 A. I earned a Bachelor of Science Degree in Mechanical Engineering from the  
4 University of South Carolina in Columbia, South Carolina, in 1995. While in  
5 college, I was a student intern in the Fossil Hydro Power Plant Performance Group  
6 for five years. Since graduation, I have held various positions within the Fuel  
7 Department to include managing rail transportation and delivery, spot coal  
8 purchasing, coal quality management, synthetic fuel optimization, and state and  
9 federal regulatory reporting. While Manager of Fuel Technical Services, Industrial  
10 Coal and Synfuel, I worked with coal suppliers and SCE&G's power plants to  
11 increase fuel and transportation flexibility as well as to maximize the utilization of  
12 the Company's assets. In December 2009, I was promoted to General Manager of  
13 the Coal and Oil Procurement Department, and in January 2016, I assumed my  
14 current position.

15  
16 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

17 A. The purpose of my testimony is to describe the procurement and delivery  
18 activities for coal and No. 2 fuel oil used in electric generation for SCE&G as well  
19 as GENCO's Williams Station for the period January 1, 2018, through December  
20 31, 2018 (the "Review Period"). I also discuss changes that have occurred in coal  
21 markets since the last annual fuel adjustment hearing and how these changes  
22 affected coal procurement during the Review Period. My testimony also describes

1 the procurement and delivery of limestone for our wet scrubbers located at the  
2 Wateree and Williams steam plants. Finally, my testimony explains the nuclear fuel  
3 purchasing process for SCE&G generation and discusses uranium prices for the  
4 Review Period and the near-term outlook.

5  
6 **Q. PLEASE DESCRIBE GENCO AND ITS RELATIONSHIP TO SCE&G.**

7 A. GENCO was incorporated on October 1, 1984 and owns Williams Electric  
8 Generating Station. GENCO sells to SCE&G the entire capacity and output from  
9 Williams Station under a Unit Power Sales Agreement approved by the Federal  
10 Energy Regulatory Commission. Hereafter, when I refer to SCE&G's fossil steam  
11 plants, I include GENCO.

12  
13 **COAL, NO. 2 FUEL OIL, AND**  
14 **LIMESTONE PURCHASING**

15 **Q. PLEASE SUMMARIZE SCE&G'S FUEL PROCUREMENT NEEDS AND**  
16 **PURCHASING PRACTICES FOR SCE&G'S FOSSIL PLANTS.**

17 A. The Fuel Department purchases all coal, No. 2 fuel oil, limestone, and  
18 associated transportation for SCE&G's fossil plants focusing on reliability of  
19 supply, conformity with operational and environmental requirements, and  
20 reasonable prices.

1   **Q.   WHAT WAS THE BURN RATE FOR COAL IN 2018 AND WHAT DO YOU**  
2   **EXPECT THE BURN RATE FOR COAL TO BE IN 2019?**

3   A.       In 2018, SCE&G consumed 3,340,199 tons of coal in the production of  
4   electricity for its customers. This amount was within 0.16% of the coal consumed  
5   in 2017.

6       The Company projects that its burn rate for coal in 2019 will be  
7   approximately 2,581,384 tons. This projected burn rate is based on normal weather,  
8   the Company's projections of coal and natural gas prices, and the economic dispatch  
9   of units.

10  
11   **Q.   HOW DOES THE COMPANY SECURE NECESSARY QUANTITIES OF**  
12   **COAL AND NO. 2 FUEL OIL AT COMPETITIVE PRICES?**

13   A.       Coal is procured under long-term (more than one year) and spot purchase (up  
14   to one year) agreements to achieve a balance of reliable supplies while maintaining  
15   flexibility to react to market changes or short-term system needs. Under historic  
16   market conditions, SCE&G seeks to have long-term purchases represent  
17   approximately 75% to 80% of projected system demand. Spot purchases provide a  
18   mechanism to manage inventories and react to short-term changes in the  
19   marketplace, and generally represent 20% to 25% of projected system demand.

20       In contrast to the complexities of coal purchasing contracts, contracts for No.  
21   2 fuel oil are requirements contracts that are competitively solicited every two years.

1 Generally, pricing for these contracts is based upon market indices that are adjusted  
2 daily.

3 SCE&G maintains an active list of qualified suppliers of coal and No. 2 fuel  
4 oil. Typically, as contracts expire or needs are identified, solicitations are issued for  
5 competitive sealed bids. Responses to these solicitations inform our knowledge of  
6 market demand and prices. Moreover, because the responses to these solicitations  
7 often include proposals for coal supplies with specifications different than the  
8 requested specifications, these responses also aid our ongoing efforts to ascertain  
9 price differences for varying qualities of fuels.

10  
11 **Q. PLEASE SUMMARIZE THE COMPANY'S COAL PURCHASES DURING**  
12 **THE REVIEW PERIOD.**

13 A. The Company took delivery of 2,226,228 tons of coal under long-term  
14 agreements and 1,053,656 tons of coal through spot purchases during the Review  
15 Period. As a whole, long-term agreements provided 67.88% of the requirement for  
16 the Company's coal-fired stations, while spot purchases accounted for the remaining  
17 32.12% of SCE&G's coal requirements during 2018. In summary, operational  
18 considerations, weather, fuel market conditions, and economic dispatch of the  
19 Company's generating assets combined to impact SCE&G's balance of coal  
20 purchases in the Review Period, driving the Company to rely more heavily on short-  
21 term agreements to meet its requirements for coal.

1 **Q. FOR 2019, PLEASE EXPLAIN THE COMPANY'S PLANS FOR**  
2 **ADDRESSING ITS NEEDS FOR COAL SUPPLIES UNDER LONG-TERM**  
3 **CONTRACTS AND SPOT PURCHASES.**

4 A. SCE&G anticipates soliciting suppliers of coal for additional long-term  
5 contracts in 2019. The Company currently has contracts in place that is projected to  
6 meet a balance of approximately 65.01% of coal supplies through long-term  
7 contracts and approximately 34.99% through short-term contracts in 2019.  
8 However, this balance may not be achieved because of market conditions, weather,  
9 and operational considerations. The Company plans to maintain the flexibility to  
10 manage its coal inventories and purchase the most competitively priced fuel being  
11 ever mindful that its burn rate has the potential to fluctuate widely due to market  
12 conditions and changes in the price of coal or natural gas which may result in  
13 imbalances of fuel supply and demand. In sum, the Company will continue to  
14 evaluate market conditions carefully, always seeking to purchase coal supplies for  
15 our customers at economically reasonable prices while ensuring that the Company's  
16 service commitments are reliably and prudently met.

17  
18 **Q. HOW MUCH COAL DOES SCE&G PLAN TO PURCHASE IN 2019 UNDER**  
19 **LONG-TERM CONTRACTS?**

20 A. SCE&G currently has long-term contracts with seven suppliers for the  
21 delivery of 1.8 million tons of coal. This quantity represents 65.01% of SCE&G's  
22 expected total coal receipts for 2019. The coal purchased under these contracts

1 ranges in quality from 12,500 to 12,700 British Thermal Units (“BTU”) per pound  
2 and from 1.00% to 1.63% sulfur content. These contracts are for an initial period of  
3 three years, and some of the contracts have options to renew. The amount of coal  
4 under contract will vary from year to year, and the contract terms will vary from  
5 contract to contract.

6 During 2019, the Company will continue to carefully evaluate its need for  
7 coal in future periods. We anticipate that SCE&G will negotiate additional  
8 commitments for coal supply for 2020 and beyond seeking to maintain a reasonable  
9 balance between coal supplied under long-term contracts and spot purchases while  
10 obtaining coal at reasonable prices and ensuring that the Company’s supply  
11 requirements are reliably and prudently met.

12  
13 **Q. FOR 2019, PLEASE EXPLAIN THE COMPANY’S CURRENT PLANS FOR**  
14 **ADDRESSING ITS NEEDS FOR COAL SUPPLIES UNDER SHORT-TERM**  
15 **CONTRACTS.**

16 A. The Company currently has spot contracts with seven suppliers for the  
17 delivery of 439,000 tons of coal. This quantity represents 15.81% of SCE&G’s  
18 expected total coal receipts for 2019. The purchase of the remainder of the  
19 Company’s expected coal purchases in 2019 of 19.18% (100% - (65.01% long-term  
20 + 15.81% short-term) = 19.18%) will be heavily dependent on weather and the  
21 generation produced at the other generation assets employed by SCE&G. The  
22 Company will make additional spot or long-term purchases as needed to ensure that

1 sufficient supply is available for its electricity generation needs at a reasonable  
2 price. Acquiring coal supplies in this manner will provide SCE&G with the  
3 flexibility to manage its generation assets in the most cost-effective way, which can  
4 vary from month to month.

5  
6 **Q. GIVEN THE STATE OF THE DOMESTIC COAL MARKET, WILL**  
7 **SUFFICIENT SUPPLIES OF COAL BE AVAILABLE ON THE SPOT**  
8 **MARKET TO MEET THE COMPANY'S GENERATION NEEDS?**

9 A. With utilities across the country relying more heavily on natural gas  
10 generation facilities, the demand for coal in the domestic market has continued to  
11 fluctuate. Export coal demand was strong in 2018 which resulted in a challenging  
12 environment for the procurement of spot coal. Even given the above coal suppliers  
13 continued to produce but at diminished levels and with less capacity to increase  
14 production if needed due to demand. While the Company does not anticipate that  
15 these market conditions will change in the short-term, current supply forecasts  
16 indicate coal supplies will remain available but may be limited depending on  
17 international demand.

1   **Q.   HOW DOES SCE&G ENSURE THAT THE RIGHT QUANTITY OF FUEL**  
2       **SUPPLIES IS AVAILABLE TO MEET GENERATION DEMANDS AT ITS**  
3       **FOSSIL FUEL FACILITIES?**

4   A.       SCE&G uses several steps to bring the fuel supply and demand factors  
5       together. Fuel usage levels are calculated and forecasted for each of the generating  
6       plants. Coal and No. 2 fuel oil inventories are then validated and contract quantities  
7       are summed and compared against system usage to determine needs going forward.  
8       With this information, the Fuel Department carefully evaluates the Company's coal  
9       requirements and determines whether transportation options under current  
10      contracts, spot purchases, or additional long-term agreements are appropriate.  
11      Through this process, SCE&G has been successful in leveraging long-term and  
12      short-term coal purchases to achieve reasonable purchase prices while ensuring the  
13      reliability of coal supplies necessary to support system needs.

14           No. 2 fuel oil is purchased to ensure adequate back up to natural gas for  
15      SCE&G's intermediate and peaking generators. Typically, fuel storage tanks are  
16      filled going into peak usage periods.

17   **Q.   HOW DOES THE COMPANY DETERMINE A "REASONABLE PRICE"**  
18       **FOR COAL AND NO. 2 FUEL OIL PURCHASES?**

19   A.       The Fuel Department works diligently to achieve an optimization between  
20       adequate fuel supplies of acceptable quality at reasonable purchase prices. The  
21       ultimate value of the delivered fuel (coal or No. 2 fuel oil) is determined by the

1 actual delivered cost per Million British Thermal Units (“MMBTU”), accounting  
2 for any fuel impacts in the operation of our generating plants. Market prices  
3 fluctuate due to such things as seasonality, political turmoil, national weather trends,  
4 and domestic/international supply/demand imbalances. SCE&G continuously  
5 evaluates factors that impact prices, while employing contract strategies such as  
6 predetermined price adjustments, price collars, and quarterly adjustments to  
7 mitigate the effect market conditions have on coal contracts. Market publications,  
8 indices, industry solicitations, trade associations, and interacting with market  
9 participants are some of the sources and methods that we use to stay abreast of  
10 market trends and conditions.

11  
12 **Q. HOW DOES THE COMPANY MANAGE COAL INVENTORIES TO**  
13 **ENSURE RELIABILITY AND AVAILABILITY?**

14 A. To maintain adequate supply at its coal-fired generating facilities, the  
15 Company continuously manages inventories using long-term contracts, spot market  
16 purchases, and transportation options. The Company used these tools in support of  
17 its efforts to maintain an inventory of approximately 680,000 tons of coal during the  
18 Review Period based on the average of each of 12 months’ ending inventories to  
19 support anticipated consumption during the Review Period and to maintain enough  
20 coal to run each coal unit at full capacity for approximately 45 days. This  
21 methodology allows for an inventory of more than 680,000 tons at the beginning of  
22 high demand periods and less than 680,000 tons entering the milder months. This

1 targeted inventory level aids in protecting SCE&G and its customers against lack of  
2 coal availability as well as against production and delivery problems that may arise  
3 from time to time. The coal inventory is also an immediately available resource to  
4 meet our supply needs when short-term market prices are unfavorable. A crucial  
5 aspect of the Company's inventory management is balancing its short-term needs  
6 against long-term requirements and expected future operating conditions.  
7

8 **Q. PLEASE PROVIDE AN OVERVIEW OF TRANSPORTATION SERVICES**  
9 **DURING THE REVIEW PERIOD.**

10 A. In 2018, CSX Transportation, Inc. ("CSX") remained the primary rail  
11 transporter of coal for SCE&G. While the CSX contract rates remained relatively  
12 stable during 2018, the rates were subject to quarterly adjustments according to  
13 indices published by the American Association of Railroads. SCE&G executed a  
14 new contract with CSX that began on March 1, 2018. Under the new contract,  
15 SCE&G realized significant reductions in the cost of freight.

16 The Company also was under a long-term contract with Norfolk Southern  
17 Railway Company during a portion of the Review Period. The long-term contract  
18 with Norfolk Southern expired on June 30, 2018.  
19

20 **Q. DOES SCE&G HAVE ACCESS TO INTERNATIONAL COAL SUPPLIES?**

21 A. Yes. Although the Company did not receive any deliveries of international  
22 coal during the Review Period, SCE&G has the capability of obtaining and

1 transporting imported coal to its coal generation facilities on a spot or as-needed  
2 basis when prices for international coal are competitive with domestically produced  
3 coal.

4  
5 **Q. PLEASE DESCRIBE THE STATE OF THE INTERNATIONAL COAL**  
6 **MARKET IN WHICH SCE&G PARTICIPATES AND ITS CURRENT**  
7 **PLANS REGARDING IMPORT COAL.**

8 A. International coal prices have fluctuated over the Review Period, with the  
9 Company continuing to monitor the market for use of international coal in  
10 SCE&G's system. Demand for coal in the international market from US ports has  
11 been strong in the Review Period. Coal shipments increased because domestic coal  
12 prices were competitive in the global market, and those coal exports are expected to  
13 remain strong into 2019.

14 SCE&G will continue to monitor and remain informed of opportunities to  
15 purchase international coal as part of its ongoing effort to reduce fuel costs for both  
16 SCE&G and its customers and to ensure that an adequate supply of coal is available  
17 to meet its generation needs.

18  
19 **Q. WHAT WERE SCE&G'S DELIVERED COAL COSTS FOR THE REVIEW**  
20 **PERIOD?**

21 A. SCE&G's average delivered cost in dollars per MMBTU by month for coal  
22 purchased for steam plants during the Review Period is set forth in Table 1.

**Table 1**

Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
\$3.39	\$3.51	\$3.24	\$3.27	\$3.13	\$3.27	\$3.17	\$3.18	\$3.32	\$3.25	\$3.45	\$3.38

**Q. WHAT CHANGES DOES THE COMPANY ANTICIPATE IN THE COAL MARKET FOR THE 2019 FORECASTED PERIOD?**

A. SCE&G's coal prices for the forecasted period are expected to fluctuate around current levels depending on SCE&G's need for spot coal. Over the past 12 months, the price per ton of CAPP coal increased from \$63.90 per ton on January 5, 2018, to \$75.25 per ton on December 28, 2018, representing an approximately 15% price increase. Spot coal prices have been stable in January 2019 at approximately \$76.00 per ton.

CAPP coal prices will be affected by a dwindling active coal reserve base, a lower amount of coal suppliers operating in the current market, Environmental Protection Agency ("EPA") and Mine Safety and Health Administration regulations, and the redeployment of capital dollars away from coal mining. These mounting issues have led to a more limited ability to borrow money for recapitalization of mines in general, and the inability of mining companies to acquire new mining permits. These factors will continue to put upward pressure on coal production costs during 2019 and beyond. Notwithstanding these upward pressures, the Company expects coal prices will increase as spot coal is purchased in an elevated market and as long-term solicitations are received and concluded in

1        2019. Supply is expected to be stable and obtainable based primarily on the  
2        continued supply of low cost natural gas, new combined-cycle gas generation  
3        capacity being added inside and outside of SCE&G's service area, and continued  
4        decommissioning of coal consuming power plants, all of which reduces the demand  
5        for coal.

6  
7        **Q.        WHAT ADDITIONAL STEPS IS THE COMPANY TAKING TO MITIGATE**  
8        **FUEL-RELATED EXPENSES?**

9        A.        SCE&G continuously tries to reduce costs by purchasing coal of lower  
10       quality where practicable and acceptable to a coal-burning plant. During 2018,  
11       SCE&G elected to take delivery of coals purchased mainly from the Central  
12       Appalachia as well as purchasing coal from Northern Appalachia. Generally, these  
13       coals could be purchased at a lower delivered cost than lower quality coals  
14       purchased directly from a Central Appalachian coal supplier while maintaining the  
15       reliability of the coal units. These coals were consumed at SCE&G's Cope,  
16       Williams, and Wateree Stations. SCE&G will continue with this practice until it is  
17       no longer beneficial or different coals need to be purchased for testing.

**Q. WHAT HAS BEEN THE RECENT PRICING TREND IN THE NO. 2 FUEL OIL INDUSTRY?**

A. Delivered No. 2 fuel oil average monthly prices during the Review Period ranged from a low of \$14.31/MMBTU in March 2018 to a high of \$22.10/MMBTU in February 2018.

Set forth below is Table 2 that shows the average system delivered No. 2 fuel oil prices in dollars/MMBTU for the Review Period for No. 2 fuel oil purchased for steam plants, gas turbines, and combined cycle units.

**Table 2**

Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
\$16.00	\$22.10	\$14.31	\$15.68	\$16.88	\$16.66	\$16.33	\$16.24	\$16.84	\$17.83	\$16.75	\$14.51

**Q. WHAT RESPONSIBILITIES DOES THE FUEL DEPARTMENT HAVE WITH RESPECT TO SO<sub>2</sub> AND NO<sub>x</sub> ALLOWANCES?**

A. The Fuel Department purchases or trades EPA sulfur dioxide (“SO<sub>2</sub>”) and nitrogen oxides (“NO<sub>x</sub>”) emission allowances as needed by SCE&G to compensate for its SO<sub>2</sub> emissions. However, SCE&G currently is emitting less than its SO<sub>2</sub> and NO<sub>x</sub> emission allowances allocated to it by the EPA. For this reason, the Company was not required to purchase SO<sub>2</sub> and NO<sub>x</sub> emission allowances. The Company also does not anticipate having to buy any SO<sub>2</sub> or NO<sub>x</sub> emission allowances in 2019.

1 **Q. PLEASE EXPLAIN THE FUEL DEPARTMENT'S ACTIVITIES RELATED**  
2 **TO THE PROCUREMENT OF LIMESTONE FOR SCE&G'S POLLUTION**  
3 **CONTROL FACILITIES.**

4 A. The Fuel Department is responsible for securing adequate and reliable  
5 supplies of limestone for the effective operation of wet limestone scrubbers at the  
6 Company's Wateree and Williams Stations. There continues to be limited suppliers  
7 for limestone for Williams and Wateree Stations. During the Review Period, the  
8 Company acquired all of its supplies of limestone from a single source, which has  
9 proven to be effective and market priced.

10 The limestone is delivered to Williams and Wateree Stations by truck since  
11 the current source of supply is located near the plants. In summary, the Company  
12 continues to evaluate supply and transportation options designed to ensure adequate  
13 and reliable supplies of limestone at reasonable prices at its Williams and Wateree  
14 Stations.

#### 15 **NUCLEAR FUEL PURCHASING**

16 **Q. PLEASE DESCRIBE THE NUCLEAR FUEL CYCLE.**

17 A. Uranium ore is the source of fuel used to generate electricity in nuclear  
18 reactors. Naturally occurring uranium primarily consists of two isotopes, 0.7%  
19 Uranium-235 and 99.3% Uranium-238. As depicted in Exhibit No. \_\_ (MDS-1)  
20 attached hereto, uranium must undergo a series of processes to produce a useable  
21 fuel before it can be used in a reactor for electricity generation. These processes are  
22

1 mining and milling, conversion, enrichment, and fabrication. In the first stage,  
2 uranium is mined. Once the ore is mined it is sent to a mill where it is crushed into  
3 smaller pieces and then introduced to a slurry in which a strong mixed solution is  
4 used to dissolve the uranium. At this point in the mining and milling process, the  
5 uranium is then dried and commonly referred to as yellowcake, also known as  
6 uranium oxide (“U<sub>3</sub>O<sub>8</sub>”) concentrate. In the next step of the process, known as  
7 conversion, the U<sub>3</sub>O<sub>8</sub> goes through a chemical process in which it is converted into  
8 uranium hexafluoride (“UF<sub>6</sub>”). The UF<sub>6</sub> then becomes the feedstock required in the  
9 isotopic separation process, known as enrichment. Once the UF<sub>6</sub> is enriched to the  
10 desired level, it is converted to uranium dioxide (“UO<sub>2</sub>”) powder and formed into  
11 pellets. This process, and the subsequent steps of inserting the fuel pellets into fuel  
12 rods and bundling the rods into fuel assemblies for use in nuclear reactors, is referred  
13 to as fabrication.

14 **Q. PLEASE DESCRIBE HOW YOUR DEPARTMENT MAKES PURCHASING**  
15 **DECISIONS FOR NUCLEAR FUEL.**

16 A. During the Review Period, the responsibilities related to nuclear fuel  
17 procurement were shared between my Department and the Nuclear Design and  
18 Analysis department (“NDA”). NDA prepared a forecasted refueling schedule  
19 which is reviewed by my Department on an annual basis. This forecast formed the  
20 foundation for the nuclear fuel requirements forecast. Once the nuclear fuel  
21 requirements forecast was developed, the Fuel Department was primarily

1 responsible for procuring  $U_3O_8$  and conversion services and NDA was primarily  
2 responsible for procuring enrichment and fabrication services. Collectively, my  
3 Department and NDA form the Nuclear Fuel Procurement team (“Team”). The  
4 Team determined nuclear fuel requirements, shared market information and  
5 reviewed offers related to all segments of the nuclear fuel cycle.  
6

7 **Q. ARE SCE&G’S CONTRACTS TO PURCHASE NUCLEAR FUEL**  
8 **NORMALLY SHORT-TERM OR LONG-TERM?**

9 A. Due to the long lead time required to process uranium prior to being loaded  
10 in SCE&G’s reactor, the Company’s contracts are normally long-term contracts,  
11 with a term in excess of one year. Currently the Company has long-term  
12 commitments for uranium and conversion services, enrichment and fabrication for  
13 V.C. Summer Unit One. During the Review Period, the Team monitored the nuclear  
14 fuel market on an ongoing basis and evaluated spot market opportunities from time  
15 to time that may supplement long-term contract supplies as appropriate. Included in  
16 the procurement process is the Company’s contingency reserve. The nuclear fuel  
17 contingency reserve targets are designed to provide security of supply for future  
18 requirements by mitigating potential market disruptions.  
19  
20

1 **Q. PLEASE DESCRIBE THE MOVEMENT OF NUCLEAR FUEL PRICES**  
2 **DURING THE CURRENT REVIEW PERIOD.**

3 A. The nuclear fuels market is comprised of two types of pricing scenarios: spot  
4 and long-term. Spot prices typically represent any transaction taking place within a  
5 year while long-term prices require a commitment for some period beyond one year.  
6 Each of the nuclear fuel processes can be purchased individually or bundled at any  
7 point in the fuel cycle, with the exception of fabrication. Fabrication is a complex  
8 process that has specific requirements for each individual reactor and therefore is  
9 typically sourced to a single supplier with long-term agreements. Over the past few  
10 years short-term and long-term prices for uranium, conversion, and enrichment have  
11 remained stable. In the near term, prices for uranium and the other processes in the  
12 nuclear fuel cycle are anticipated to continue to remain stable for both short-term  
13 and long-term pricing.

14  
15 **Q. DURING THE REVIEW PERIOD, DID THE COMPANY EXPERIENCE**  
16 **ANY ISSUES CONCERNING ITS PROCUREMENT OF NUCLEAR FUEL?**

17 A. Yes. SCE&G currently procures UF<sub>6</sub> pursuant to a long-term contract with  
18 Cameco, Inc. ("Cameco"). This contract provides that, if there is a reduction in the  
19 total quantity of electricity that the Company will generate at V.C. Summer,  
20 SCE&G has the right to elect to reduce the quantity of UF<sub>6</sub> SCE&G otherwise was  
21 supposed to receive. As a result of the delays experienced with the construction of  
22 Units 2 and 3 at V.C. Summer, SCE&G exercised this right in 2016 so as to reduce

1 its future deliveries of UF<sub>6</sub>. Following the abandonment of the Units, SCE&G again  
2 exercised this right in 2017 so as to further reduce its future UF<sub>6</sub> needs.

3  
4 **Q. HOW DID CAMECO RESPOND TO SCE&G EXERCISING ITS RIGHTS**  
5 **TO REDUCE ITS FUTURE DELIVERIES?**

6 A. On November 8, 2018, Cameco notified SCE&G that it disputed the  
7 Company's decision to reduce future UF<sub>6</sub> deliveries and, on December 29, 2018,  
8 elected to submit the dispute to binding arbitration as provided in the contract.  
9 Although this matter is in its initial stages, SCE&G intends to vigorously challenge  
10 Cameco's claims and to fully defend its contractual rights to elect to reduce these  
11 deliveries. The Company will update the Commission as to the status of this issue  
12 in future fuel proceedings.

13  
14 **CONCLUSION**

15 **Q. WHAT REQUEST DOES SCE&G MAKE OF THE COMMISSION IN THIS**  
16 **PROCEEDING?**

17 A. The Fuel Department has made reasonable and prudent efforts to obtain  
18 reliable, high quality supplies of coal, No. 2 fuel oil, and limestone and associated  
19 transportation at the lowest possible cost to SCE&G's customers. Likewise, the Fuel  
20 Department made reasonable and prudent efforts to obtain market-based prices and  
21 reliable supply for its nuclear fuel needs for electric generation and procured at  
22 reasonable prices the necessary capacity for delivery of that supply. Therefore, on

1       behalf of SCE&G, I respectfully request that the Commission find that the  
2       Company's fuel purchasing practices were reasonable and prudent for the Review  
3       Period.

4  
5   **Q.   DOES THIS CONCLUDE YOUR TESTIMONY?**

6   **A.       Yes.**

# The Nuclear Fuel Cycle
